

Skyscrapers Puzzle

Rule

- Assume you are watching buildings of height 1–6 from above.
- Each row and each column contains each digit of 1–6 represents the height of a building exactly once.
- Digits outside of the grid indicate how many buildings you can see from that point.
- Digits with an operation indicate sum (+) or product (x) of heights of buildings you can see from that point.
- There is only one solution.
